The Ultimate in Timber Doorsets

Door Frames

Door frames are an essential part of any door set. All Haydock frames are made to measure - individually machined, assembled and ready to accept the door leaf. Our range of frames are able to accommodate both standard and non standard door openings e.g. wheelchair/mobility access.

- All door frames are treated prior to final finish.
- Frames are grooved for both intumescent and draught seals.
- A full range of single, double and combination frames are manufactured to suit all door sizes.
- All door frames meet part M with respect to low thresholds.
- A range of timber and aluminium thresholds to meet barrier-free access is available for all eventualities.

Door Leaf

All the timber used in the manufacture of Roger Haydock timber doors is FSC or PEFC approved thereby offering full chain of custody. By using the whole tree (instead of only part) and using the very latest technology we offer "full log" conversion, thereby saving 30% - 90% of the world's forest resources.

Wood is highly energy efficient. Very little energy is required to fell logs, machine components and assemble. Once fitted and properly weather treated, a timber door is a superb barrier against the elements. All doors meet the requirements of PAS 23, PAS 24, and Secured By Design. A variety of glazing options are available. Our unique glazing system prevents the glass unit being removed from the outside. This minimises the risk of forced entry. Doors are supplied fully finished. The Haydock state of the art paint line offers the very best in factory applied finishes.

Hardware Suited Furniture

Hardware is available in a range of finishes, most commonly brass, gold, silver or chrome. All the furniture e.g. lever handles, letter plates, door knockers and numerals are selected for their aesthetic and security qualities. Hinges are made from 100mm stainless steel in self-colour, gold or chrome to meet BS7352. Low line thresholds are fitted to meet part M regulations.

Multi-point locking systems in a hook or bolt option are fitted as standard. Roger Haydock fit as standard the Fullex Crimebeater lock. These have a 55mm backset and stainless steel radius faceplate. Fully adjustable box keeps are fitted to the frame to offer greater security.

Anti-bump cylinders, (in either brass or chrome finish) are fitted as standard. Key/key or key/thumb turn, suited or master key are available on request. A Fullex Cylinder Guard is fitted as standard to prevent snapping of the cylinder.

Door Styles

Our doors come in a variety of styles and colours. Over 60 styles are available in a full range of veneer finishes. Just some of the styles and colours are shown here.

Due to the limitations of the 4 colour printing process, the colours of the doors shown in this leaflet act only as a guide to the actual colours of the doors supplied.

Fire Rated Doorsets

A wide range of Fire Rated Doorsets are available. These are manufactured from a standard 44 mm door leaf (to achieve half-hour rating) or 54 mm (to achieve one hour rating). Door blanks are laminated both sides with WBP plywood veneers, lipped on all four edges with 12 mm hardwood lippings.

All hardware is fitted using a range of fire retardant materials including intumescent paste, paper and sealants. The door leaf and frame are available in either paint or stain applied finishes or clear lacquer to veneered skins. Glazing options are 6.8 mm wired polish glass or pyroshield.

Further details are available from our sales/technical departments.
